### Withdrawal of Finality

Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

Applicant's arguments with respect to claims 1, 3-9, and 11-15 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 3-9, and 11-15 are rejected under 35 U.S.C. 102(e) as being anticipated by Coolbaugh et al (US 6,876,028B1).

Coolbaugh et al disclose metallization of copper(col. 3, lines 54-59) and a bottom electrode of a capacitor and a cap layer for copper conductor made of a diffusion barrier material, which satisfies the limitation that it is a protective layer(col. 2, lines 41-55). The bottom electrode of the capacitor and the cap layer are made of the same material and from the same layer(col. 2, lines 41-55 and col. 3, lines 38-50 and col. 4, lines 1--25). The diffusion barrier may be made from W, TaN, IrO<sub>2</sub>(col. 2, lines 63-67). The capacitor dielectric may be Ta<sub>2</sub>O<sub>5</sub>, HfO<sub>2</sub>(col. 3, lines 1-9). In Fig. 2B,

conductor 256 is shown partially over protective layer 232B. In Fig. 7F conductor 656B is shown over protective layer 632B.
